

Claims

1. A covering (200, 400) for cable entry device (100, 500, 600) for providing sealing in a space between a cable
5 and a material surrounding the device, comprising a first and a second sealing member (220, 230, 420, 430), which are formed by a recess (410) of the outer periphery of the covering, for receiving said material therebetween, **characterized** in that the first sealing member provides a
10 biasing force on the covering when inserted into a hole of said material.

2. The covering according to claim 1, **characterized** in that the first and second sealing members (220, 230,
15 420, 430) are flexibly connected to the covering.

3. The covering according to claim 1 or 2, **characterized** in that the circumference at a free end of the first sealing member (220, 420) is larger than the
20 circumference of a free end of the second sealing member (230, 430).

4. The covering according to any of the previous claims, **characterized** in that free ends of the first and
25 second sealing members (220, 230, 420, 430) abut a first and a second side of the surrounding material, respectively, when the covering is inserted into a hole therein.

30 5. The covering according to any of the previous claims, **characterized** in that the first sealing member (220, 420) extends outwardly from a first end of the covering towards the second sealing member (230, 430), and the second sealing member extends outwardly from a second
35 end of the covering towards the first sealing member.

6. The covering according to any of the previous claims, **characterized** in that the covering comprises means (440, 441, 442) for temporarily receiving the second
5 sealing member during insertion into a hole.

7. The covering according to claim 6, **characterized** in that the means for temporarily receiving the second sealing member comprises a recess of the covering having a
10 depth corresponding to the thickness of the second sealing member (430).

8. The covering according to claim 6 or 7, **characterized** in that the means for temporarily receiving
15 the sealing member comprises an irregular surface (440) of the covering having a first and a second portion (441, 442), the first portion having a diameter corresponding to the diameter of the hole, to which the device is dimensioned for, and the diameter of the second portion
20 plus twice the thickness of the second sealing member (430) correspond to the diameter of said hole.

9. The covering according to claim 8, **characterized** in that the second portion (441) will extend at least
25 partially through the hole when the covering is inserted therein.

10. Use of the covering according to any of the claims 1 to 9 as a cable entry device.
